

A woman with short grey hair is sleeping peacefully in a bed. She is wearing a clear CPAP mask over her nose and mouth, connected to a white tube. The bed has white linens and a large, ruffled white pillow. To her right, on a dark wooden bedside table, sits a white Philips DreamStation AVAPS CPAP machine with a blue water reservoir. The background is a dark wood headboard.

PHILIPS

DreamStation AVAPS

Automated. Custom.

Comfort.

The therapy your patients need. **The confidence you want.**

DreamStation home ventilation solutions automatically adapt to the unique needs of every patient, delivering excellent care night after night for the long term.

Every patient suffering from chronic respiratory disease has changing therapeutic demands. With DreamStation BiPAP AVAPS and BiPAP S/T noninvasive ventilation solutions, you have the power to treat them that way. Using clinically proven therapy solutions, DreamStation noninvasive ventilators adapt to these changing patient needs, helping normalize ventilation.

Excellent patient care is simply automatic

DreamStation BiPAP ventilation systems align with your patients breathing patterns to minimize applied pressure support, and machine breaths. And, they help you stay connected and informed with daily data on patient usage, compliance and efficacy.

Using clinically proven solutions

Proven Philips clinical innovations support custom and connected care for the unique needs of patients. You can rely on DreamStation sleep and ventilation products to meet the needs of your patients with independently verified outcomes, like being the first noninvasive ventilation solution that can automatically and simultaneously treat hypercapnia and OSA in any noninvasive ventilation mode.

An Encore performance

DreamStation BiPAP ventilation systems connect to our powerful Encore Suite patient management system. EncoreAnywhere[®], EncorePro[®] and EncoreBasic[®] makes it easy and efficient for professionals to manage patient compliance and therapy.

Delivering exceptional comfort

DreamStation home ventilation solutions are designed to deliver effective and comfortable therapy so patients can experience an improved quality of life. Using clinically proven therapy solutions, DreamStation noninvasive ventilators adapt to changing patient needs comfortably and automatically adjusting pressure support to the targeted tidal volume, helping to normalize ventilation.

***Not available in all markets.**

Patient driven design

DreamStations sleek, stylish, low-profile design offers the important features patients told us they wanted in a therapy device. Its small and light, making it easy to pack for travel. It features easy-to-navigate menus, a front-facing display that can be operated while lying down or sitting up in bed, as well as an easy-to-clean, one-piece humidifier water chamber.

Creating efficiencies

Simplify device evaluation

Performance Check simplifies in-home device evaluation for easy remote troubleshooting. Designed to reduce the time and frustration involved in device troubleshooting, this robust tool allows you to guide the patient through an easy remote diagnosis, resulting in a simple Pass/Fail result to determine if the device is operating correctly or needs to be returned for service.

Cost-effective connectivity options

The DreamStation noninvasive solution has optional Wi-Fi, modems and SpO₂ for the most comprehensive suite of connectivity options in the home ventilation market.

Innovative therapies

and powerful benefits, for your patients and you

Intuitive ventilation therapies

Average Volume Assured Pressure Support

Delivers customized patient care by automatically adapting to disease progressions and changing patient needs. Helps to maintain optimal patient comfort while supporting patient care and ventilation efficacy while simplifying the titration process.

Digital Auto-Trak

An adaptive algorithm that monitors each breath to provide personalized therapy adjustments and respond to your patients changing conditions including:

- Adjusts ventilation to the patients natural breathing while compensating for leaks
- Adjusts breath triggering and cycling for each patients breath as their disease progresses
- Assists with ventilator to patient synchrony and comfort without manual adjustments

Automated Airway Management in any Ventilation Mode

Automatically and dynamically manages a patients upper airway in any ventilation mode. It continuously monitors and reacts to changes in the upper airway at the lowest possible pressure each night.

AVAPS-AE

Designed to automatically provide the lowest pressure support to meet current and future ventilator needs of the most challenging patients. This auto-titration mode has the proven performance of AVAPS, maintains a patent airway and applies an auto back-up rate.

AVAPS is proven to increase Total Sleep Time by 20% compared to manual titration for nocturnal ventilation.¹

¹Murphy, Patrick, et al. The effect of volume targeted pressure support (PS) ventilation with autotitrating expiratory positive airways pressure (EPAP) and back up rate (BUR) on sleep quality in COPD-obstructive sleep apnoea (OSA) overlap syndrome. *European Respiratory Journal* 42.Suppl 57 (2013): P2583.

Powerful, insight-inspired design

Choice of 5 ventilation modes for your basic to your more complex patients*

SpO₂ oximetry

25/30 H₂O
max pressure

Continuous Flow menu navigation has an intuitive interface that provides quick, convenient access to all of DreamStation BiPAP AVAPS and S/Ts patient and provider features, allowing for easy set ups and real-time bedside titration.

Sleek design with easy-to-use controls

of data with the patients
care team

Two-step air filtration
system with ultra-fine
filter for very fine particles

**Optional battery
power support**

Proof you can believe in

DreamStation BiPAP AVAPS delivers customized patient care by automatically adapting to disease progressions and changing patient needs with innovatively designed ventilation features.

Equally effective

AVAPS is as effective as standard fixed bi-level pressure support (PS) ventilation accompanied by a strict protocolised (protocol) setup.¹

The addition of the AVAPS ventilation feature to BPV-S/T (Bi-level Pressure Ventilation with Spontaneous/Time Mode) provides beneficial physiological improvements, resulting in a more efficient decrease of PtcCO₂ compared to BPV-S/T therapy alone.¹

Physiological improvements

Average volume-assured pressure support (AVAPS) have been developed to ensure a more consistent tidal volume per breath while delivering the comfort and advantages of pressure support ventilation.²

AVAPS provides beneficial physiological improvements, resulting in a more efficient decrease of PtcCO₂ compared to BPV-S/T therapy alone.²

The AVAPS ventilation feature automatically provides treatment for PaCO₂ reduction.²

Innovation from the Philips Respironics Dream Family

DreamStation noninvasive ventilators are part of the Dream platform from Philips Respironics. They are designed to offer exceptional comfort, intelligent monitoring, motivation and feedback, and seamless connectivity to the care team. They feature advanced event detection and automation algorithms that anticipate and respond to your patients' individual therapy needs.
